TECHNICAL DATA

Weights and Dimensions of Disassembled Units	75
Weights and Dimensions List	75
Equipment List	80
Standard and Optional Equipment	80

Specifications

Engine

Model	CUMMINS QSL9
Type	4-cycle, water-cooled, Direct-injection, Turbo-charger Diesel engine
Displacement	8.9 Liters
Rated Output	272 kW / 2,000 min ⁻¹ (370 PS / 2,000 rpm)
Fuel Tank Capacity	550 Liters
Notes	Compliant with engine emission gas regulations for USA Tier4f, EU StageIV and Japan 2014 Code.

Control

Control System	Main actuators are controlled by hydraulic pilot system. Working speeds can be precisely controlled by lever stroke and volume dial. Safety devices are securely operated by combined various electronic controls with hydraulic system.
Control Levers	Designed and layout on ergonomics. Arm chair lever type is standard.
Display Panel Design	8 inches size. Located to check working state easily without disturbing the view of the operator.

Hydraulic System

Hydraulic Tank	350 Liters		
Hydraulic Pump Capacity	Maximum pressure	31.4 MPa	
	P1	320 l / min	W3, W4 winch, Travel (R)
	P2	320 l / min	W1, W2 winch, Travel(L), Quick draw
	P3	158 l / min	Swing, Reeving winch, Cylinders
	P4	74 l / min	Fan drive(Radiator, Oil cooler)
	P5	44 l / min	Pilot

Winch

	W1 (Front)	W2 (Rear)	W3 (Hoist)	W4 (Jib Hoist)
Rope Diameter	28 mm	28 mm	28 mm	28 mm
Rope Length	335 m	610 m	490 m	370 m
Rope Speed	110m/min	110m/min		
Rated Linepull	147 kN	147 kN		
(1st layer)	(230 kN)	(230 kN)		
High speed lifting and lowering is possible by ECO mode with low engine speed under light load. Hydraulic motor with wet multiple disc brake and planetary reduction gears inside of winch drum.				

Swing Device

0.86 rpm
3 sets of hydraulic motor with wet multiple disc brake + planetary reduction gears and turn table bearing with external teeth.
Precise swing operation is possible by swing brake with pedal.

Mast

Easy assembly for front attachments.
Crawler sideframe self assembly is possible by Quick draw(Opt).
By using Quick draw system, assembly work can be done by helper crane to install 19.7 ton base counter weight.

Counter Weight

Counter Weight	Total Weight	145.0 t
	Base Weight	19.7 t × 1
	Weight	8.95 t × 14
Lower Weight	Total Weight	25.0 t
	Weight	12.5 t × 2

Carbody

High tensile steel box structure
Jack up device
Pin connection with crawler sideframe by hook on system

Crawler Sideframe

Crawler Sideframe	High tensile steel box structure With travel device and pin connection and connection cylinders	
Shoe	1250mm flat shoe	
Upper Roller	7 pieces for each side Double flange type 2 cantilever type 5	
Lower Roller	15 pieces for each side	
	Double flange type with plane bearing and floating seal for lifetime lubrication	
	Forging and heat treated steel	
Travel Device	1unit for each side	
	Hydraulic motor with wet multiple disc brake + Planetary reduction gears	
	Travel speed	High : 0.9 km/hr. Lower : 0.45 km/hr.
	Gradability	30 %

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)											
		13falls	12falls	11falls	10falls	9falls	8falls	7falls	6falls	5falls	4falls	3falls	2falls
180t	3.34	180	170	157	144	131	118	104	90	76	61	-	-
100t	3.11	-	-	-	-	-	-	100	90	76	61	46	31
45t	2.17	-	-	-	-	-	-	-	-	-	-	45	31
15t	0.62	-	-	-	-	-	-	-	-	-	-	-	15

- The necessary mass to lower the hook refers "Lowerable Boom Hook Mass" on page 10.
- The rated total load when the operation being performed with the rear post support pendant attached is the value remaining when the value in chart below is deducted from the rated total load chart.

Boom Length (m)	18	24	30	36	42	48	54	60	66	72
Equivalent Mass (ton)	0.2	0.3	0.5	0.7	0.8	0.9	1.2	1.4	1.6	1.7

- 18m boom ... with Hammer Head Boom, 350t Hook, and 28 falls.

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- Hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)
180t	3.34
100t	3.11
45t	2.17
15t	0.62

- The rated total load when the operation being performed with the rear post support pendant attached is the value remaining when the value in chart below is deducted from the rated total load chart.

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)												
		13falls	12falls	11falls	10falls	9falls	8falls	7falls	6falls	5falls	4falls	3falls	2falls	1fall
180t	3.34	180	170	157	144	131	118	104	90	76	61	-	-	-
100t	3.11	-	-	-	-	-	-	100	90	76	61	46	31	-

42	19.7t	19.6t	18.3t	42

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)												
		13 falls	12 falls	11 falls	10 falls	9 falls	8 falls	7 falls	6 falls	5 falls	4 falls	3 falls	2 falls	1 fall
180t	3.34	180	170	157	144	131	118	104	90	76	61	-	-	-
100t	3.11	-	-	-	-	-	-	100	90	76	61	46	31	-
45t	2.17	-	-	-	-	-	-	-	-	-	-	45	31	-
15t	0.62	-	-	-	-	-	-	-	-	-	-	-	-	15

- The necessary mass to lower the boom hook refers "Lowerable Boom Hook Mass" on page 10.
- The necessary mass to lower the crane jib hook refers "Lowerable Crane Jib Hook Mass" on page 10.
- The rated total load when the operation being performed with the rear post support pendant attached is the value remaining when the value in chart below is deducted from the rated total load chart.

Restriction of Hook Usage

The hooks which can be used as a jib hook, when there is and when there isn't an aux. sheave hook, are listed in the following table.
Using the unusable hook cause the jib to swing.

Tower Length	24							30						
	24	30	36	42	48	54	60	24	30	36	42	48	54	60
100t Hook	○	○	○	○	○	○	○	○	○	○	○	○	○	○

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- The usable hook when lifting tower jib is described on page 41. Using the unusable hook cause the jib to swing.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)						
		7falls	6falls	5falls	4falls	3falls	2falls	1fall
100t	3.11	100	90	76	61	46	31	-
45t	2.17	-	-	-	-	45	31	-
15t	0.62	-	-	-	-	-	-	15

- The necessary mass to lower the hook refers "Lowerable Jib Hook Mass" on page 42.
- Be sure to attach the balance weight (420kg x 2) to the top jib when the jib length is 24m.
- Remove the sheave block the boom top when using jib length 54 or 60 m for boom length 60 m.
- The gross rated load value of the jib with the sheave block the boom top is after 1.1 tons is deducted from the gross rated load of the jib.

58								56.8m x	58
60								15.8t	60

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm, level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tioping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- The usable hook when lifting tower jib is described on page 41. Using the unusable hook cause the jib to swing.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)						
		7falls	6falls	5falls	4falls	3falls	2falls	1fall
100t	3.11	100	90	76	61	46	31	-
45t	2.17	-	-	-	-	45	31	-
15t	0.62	-	-	-	-	-	-	15

- The necessary mass to lower the hook refers "Lowerable Jib Hook Mass" on page 42.
- Be sure to attach the balance weight (420kg x 2) to the top jib when the jib length is 24m.
- Remove the sheave block the boom top when using jib length 54 or 60 m for boom length 54 m.
- The gross rated load value of the jib with the sheave block the boom top is after 1.1 ton is deducted from the gross rated load of the jib.

18								18

- The rated loads are determined according to EN13000 rating on the condition that the machine is stationed on firm level ground.
- To calculate the maximum load that can actually be lifted, deduct mass of all lifting accessories, such as hook, from figures shown above.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- Working radius is the horizontal distance from the swing center to the center of gravity of a lifted load.
- The 145 ton counter weight and 25 ton lower weight are required for all capacities on these charts.
- Figures described as OOm x OOt in the tables indicate "working radius" m x "rated load" ton.
- The usable hook when lifting tower jib refers "Restriction of Hook Usage" on page 41.
Using the unusable hook cause the jib to swing.
- Correlation between the number of reeved lines, maximum rated loads, hook mass are shown in the table below.

Hook Capacity	Hook Mass (ton)	Maximum Rated Load (ton)						
		7 falls	6 falls	5 falls	4 falls	3 falls	2 falls	1 fall
180t	3.34	100	90	76	61	-	-	-
100t	3.11	100	90	76	61	46	31	-
45t	2.17	-	-	-	-	45	31	-
15t	0.62	-	-	-	-	-	-	15

- The necessary mass to lower the jib hook refers "Lowerable Jib Hook Mass" on page 42.
- The necessary mass to lower the tower head hook refers "Lowerable Tower Head Hook Mass" on page 42.
- Be sure to attach the balance weight (420 kg x 2) to the jib top when the jib length is 24 m.
- Remove the sheave block the boom top when using jib length 54 or 60 m for boom length 60 m.
- The gross rated load value of the jib with the sheave block the boom top is after 1.1 ton is deducted from the gross rated load of the jib.

Weights and Dimensions of Disassembled Units

Weights and Dimensions List

Comply with the regulations when transporting.

"Weight" refers to the mass of each single unit.

Weights and Dimensions of Disassembled Units

Description	Qty	Dimensions (mm)	Weight (kg)
Front revolving frame + rear revolving frame Mast Jacks Boom hoist winch (including rope)	1		49250
Front revolving frame + rear revolving frame Mast Boom hoist winch (including rope) without: Jacks	1		46600
Front revolving frame Jacks without: Mast Boom hoist winch (including rope)	1		34650
Front revolving frame without: Mast Jacks Boom hoist winch (including rope)	1		32000
Rear revolving frame Mast Boom hoist winch (including rope)	1	 *Stands are for temporary placement only. Use the receiver stand size of  when transporting.	14600
Crawler	2		30200
Jack beam	4		560

Weights and Dimensions of Disassembled Units

Description	Qty	Dimensions (mm)	Weight (kg)
Counter weight (Base)	1		19700
Counter weight	14		8950
Lower weight (For counter weight 145 t specifications)	2		12500
Lower step	2		280
HB9.5 ; 9.5 m Boom base W1, W2, W4 Winch	1	 *Stands are for temporary placement only. Use the receiver stand size of  when transporting.	21800
H6 ; 6 m Boom insert Connect pin Bar pendant (Boom support 6 m and rear strut support 6 m)	1		2700
H6B ; 6 m Boom insert B Connect pin Bar pendant (Boom support 6 m and rear strut support 3m)	1		2700
H9 ; 9 m Boom insert Connect pin Bar pendant (Boom support 9m and rear strut support 9m)	1		3800

Weights and Dimensions of Disassembled Units

Description	Qty	Dimensions (mm)	Weight (kg)
HR7 ; 7 m Reducer Connect pin Bar pendant (Boom support 7m and rear strut support 7m)	1		3500
HT1.5 ; 1.5 m Boom top	1		5400
LB8 ; 8 m Tower/luffing jib base	1		3120
L6 ; 6 m Tower/luffing jib insert Connect pin Pendant	1		1500
L9 ; 9 m Tower/luffing jib insert Connect pin Pendant	1		2000
LT7 ; 7 m Tower/luffing jib top	1		3400
For boom top Aux. sheave block	1		610
Crane jib base with jib strut Connect pin attached 7.8 m pendant attached	1		1280

Weights and Dimensions of Disassembled Units

Description	Qty	Dimensions (mm)	Weight (kg)
Crane jib top	1		770
Crane jib insert Connect pin attached	1		320
7.8 m pendant	2		58
5.85m pendant	12		75
1.65m pendant	2		18.4
Front strut Rear strut	1		7800
Tower/luffing jib top tip roller	2		530
Tower/luffing jib top weight	2		420

Weights and Dimensions of Disassembled Units

Description	Qty	Dimensions (mm)	Weight (kg)
350 t Hook	1		4440
180 t Hook	1		3340
100 t Hook	1		3110
45 t Hook	1		2170
15 t Hook	1		620

Equipment List

Standard and Optional Equipment

○ : Standard ● : Optional — : No setting

Item		Crane	Crane / Tower
Lower Structure	1250 mm Shoe	○	○
	Jack Beam	○	○
	Crawler Sideframe Connection Unit	○	○
	Steps	○	○
	Shoe Tension Unit (Shim Adjusting Type)	○	○
